

Controlling Access to the Files.

1. Create a new directory called InstaPhotos in your home folder and add a file named selfie.jpg inside it. Set the permissions so only you (the owner) can read and write the file, but no one else can access it.

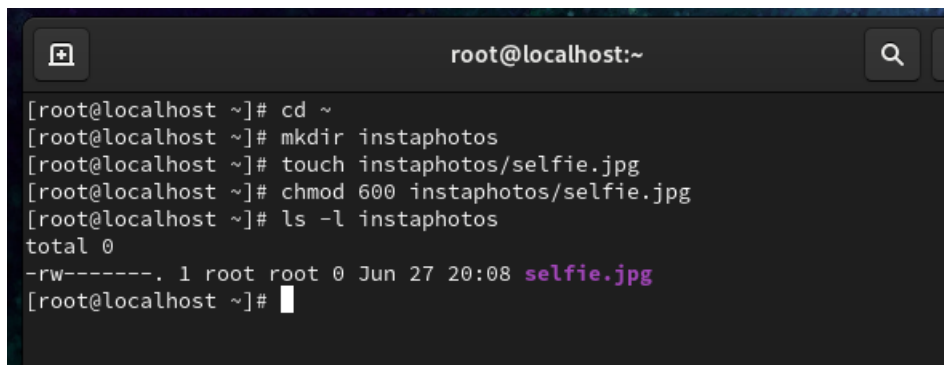

Ans- Step 1- cd ~

Step 2- mkdir instaphotos

Step 3- touch instaphotos/selfie.jpg

Step 4- chmod 600 instaphotos/selfie.jpg

Step 5- ls -l instaphotos

```
root@localhost:~  
[root@localhost ~]# cd ~  
[root@localhost ~]# mkdir instaphotos  
[root@localhost ~]# touch instaphotos/selfie.jpg  
[root@localhost ~]# chmod 600 instaphotos/selfie.jpg  
[root@localhost ~]# ls -l instaphotos  
total 0  
-rw-----. 1 root root 0 Jun 27 20:08 selfie.jpg  
[root@localhost ~]#
```

2. Simulate a shared Zomato recipe folder: create a directory called ZomatoRecipes and add a file recipe.txt inside it. Change the permissions so that everyone can read and write the file, but only you can delete it.
Hint: Use the chmod command for permissions and the sticky bit for delete protection.

Ans- Step 1- mkdir zomatorecipes

Step2 – touch zimatorecipes/recipe.txt

Step 3- chmod 666 zomatorecipes/recipe.txt

Step 4- chmod 1777 zomatorecipes

Step 5- ls -ls zomatorecipes

Step 6- ls -l zomatorecipes

```
root@localhost:~  
[root@localhost ~]# mkdir zomatorecipes  
[root@localhost ~]# touch zomatorecipes/recipe.txt  
[root@localhost ~]# chmod 600 zomatorecipes/recipe.txt  
[root@localhost ~]# chmod 1777 zomatorecipes  
[root@localhost ~]# ls -ld zomatorecipes  
drwxrwxrwt. 2 root root 24 Jun 27 20:10 zomatorecipes  
[root@localhost ~]# ls -l zomatorecipes  
total 0  
-rw----- 1 root root 0 Jun 27 20:10 recipe.txt  
[root@localhost ~]#
```

3.Change the group ownership of a file named playlist.txt (in your current directory) to a group called musiclovers, so that all group members can collaborate on editing a Spotify-style playlist.

Ans- Step 1-touch playlist.txt

Step 2- Change group: chgrp musiclovers playlist.txt

Step 3- ls -l playlist.txt

```
root@localhost:~  
[root@localhost ~]# touch playlist.txt  
[root@localhost ~]# chgrp musiclovers playlist.txt  
[root@localhost ~]# ls -l playlist.txt  
-rw-r--r-- 1 root musiclovers 0 Jun 27 20:11 playlist.txt  
[root@localhost ~]#
```

Q.4Use the chmod command to make a script file called paytm_pay.sh executable by everyone, but only editable by you. Then verify the permissions using the ls -l command.

Ans- Step 1-touch paytm_pay.sh

Step 2- chmod 755 paytm_pay.sh

Step 3- ls -l paytm_pay.sh

```
root@localhost:~  
[root@localhost ~]# touch paytm_pay.sh  
[root@localhost ~]# chmod 755 paytm_pay.sh  
[root@localhost ~]# ls -l paytm_pay.sh  
-rwxr-xr-x 1 root root 0 Jun 27 20:13 paytm_pay.sh  
[root@localhost ~]#
```

Q.5 A friend sent you a folder called MyntraOffers with files inside, but you can't open any of them. Use the chmod and chown commands to fix the permissions and ownership so that you (and only you) can access and modify all files in the folder.
Hint: Use the -R flag to apply changes recursively.

Ans- Step 1-Create Folder: mkdir Myntraoffers

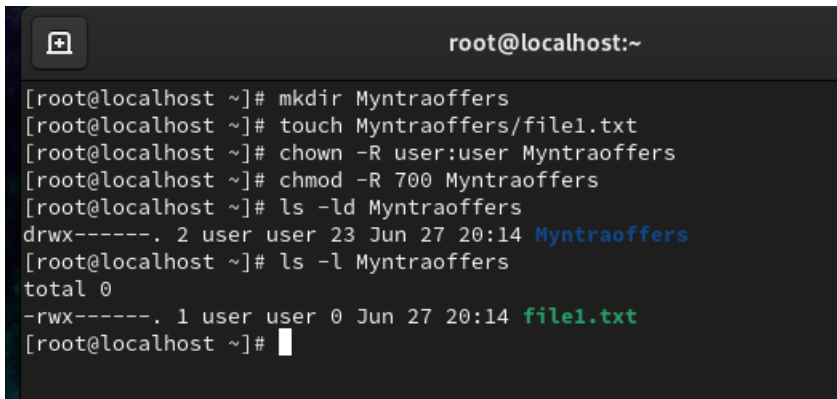

Touch Myntraoffers/file1.txt

Step 2-Change ownership: chown -R user:user Myntraoffers

Step 3-Give only the owner full access: chmod -R 700 Myntraoffers

ls -ld Myntraoffers

ls -l Myntraoffers

```
root@localhost:~  
[root@localhost ~]# mkdir Myntraoffers  
[root@localhost ~]# touch Myntraoffers/file1.txt  
[root@localhost ~]# chown -R user:user Myntraoffers  
[root@localhost ~]# chmod -R 700 Myntraoffers  
[root@localhost ~]# ls -ld Myntraoffers  
drwx-----. 2 user user 23 Jun 27 20:14 Myntraoffers  
[root@localhost ~]# ls -l Myntraoffers  
total 0  
-rwx-----. 1 user user 0 Jun 27 20:14 file1.txt  
[root@localhost ~]#
```
