

Assignment:

History & Evolution of Linux? Linux Distributions (Ubuntu, Centos ,Debian ,RHEL)?

Q.1 Display Linux Kernel Version and System Information.

Ans: Step 1 -Open Terminal

Application -> Terminal

Step 2- Run command

uname -a

A screenshot of a terminal window titled 'du@localhost:~'. The terminal shows the command 'uname -a' being executed, resulting in the output: 'Linux localhost.localdomain 6.12.0-233.el10.x86_64 #1 SMP PREEMPT_DYNAMIC Tue May 26 15:27:54 UTC 2026 x86_64 GNU/Linux'. The prompt 'du@localhost:~\$' is visible at the end of the line.

```
du@localhost:~$ uname -a
Linux localhost.localdomain 6.12.0-233.el10.x86_64 #1 SMP PREEMPT_DYNAMIC Tue Ma
y 26 15:27:54 UTC 2026 x86_64 GNU/Linux
du@localhost:~$
```

Conclusions: The uname -a command displays - kernel name , Hostname, kernel version, architecture , operating system.

Q.2 Three Key Difference Between Ubuntu , Centos, and Debian.

Ans:

Feature	Ubuntu	Centos	Debian
Package Manager	Apt	Yum/dnf	Apt
Desktop Environment	GNOME	GNOME	GNOME
Typical use	Desktop & Server	Enterprise Server	Stable Server & Desktop

Q.3 Create File Using CLI and GUI.

Ans: Method 1: Using CLI

Step 1: Open Terminal

Step 2: Create file

Touch my_linux.txt

Step 3: Verify file

Ls

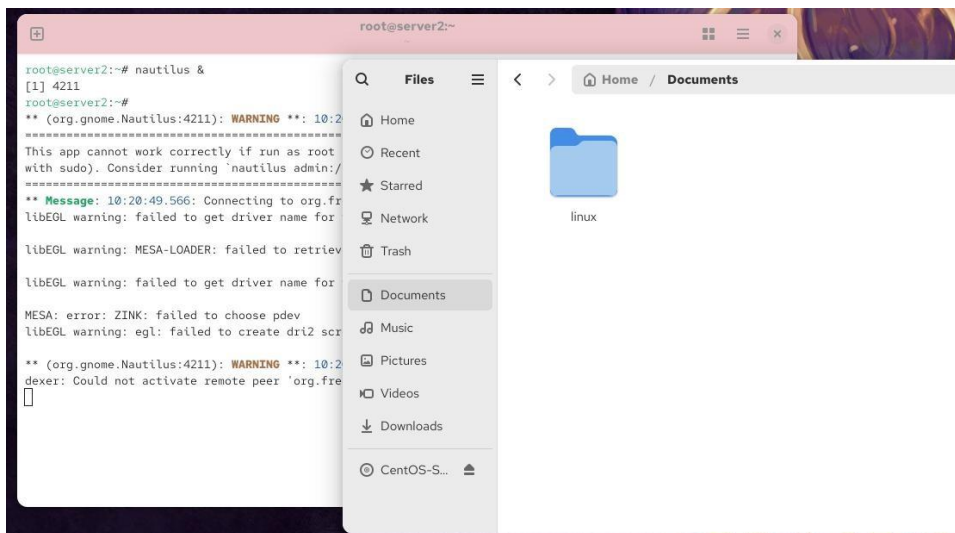

```
du@localhost:~$ touch my_linux.txt
du@localhost:~$ ls
Desktop  Downloads  my_linux.txt  Public  Videos
Documents Music      Pictures      Templates
du@localhost:~$
```

Method 2: GUI

Step 1- Open file manager

Step 2: Right click in an empty area.

Step 3: select – New Document- empty file

Q.4 Imagine you are helping a friend who only uses GUI apps like Spotify and Zomato on their Phone. Write a short guide explaining why learning the linux CLI can be powerful for tasks like installing software, managing files or troubleshooting issues.

Ans:

Linux CLI is a powerful way to control a computer using commands. It allows users to install software, manage files, and troubleshoot problems quickly. Many tasks can be completed faster in CLI than in GUI. It also helps automate repetitive work using scripts. Learning basic linux commands improves systems administration skills and makes troubleshooting easier. CLI is widely used by linux administrators and IT professionals.
